Week 8 — Project Proposal Grading Checklist

10% of the Finals Term Grade | Scored out of 100

This checklist verifies the quality and completeness of a group's Project Proposal — the plan for their capstone project — before any code has been written. Note: the Project Proposal is no longer ungraded or feedback-only; it is now formally scored out of 100 points, worth 10% of the Finals Term Grade. The instructor sign-off gate to begin Milestone 1 (see Project_Specification_and_Rubric.docx, Section 7) still applies regardless of the score awarded.

Grading Checklist

#	Criterion	Description / What's Being Checked	Max Points	Points Awarded
1	Group Formation, Repository & Theme Selection	Group has 5-6 members, with the repository set up and every member added as a contributor on the repo host; and a valid theme is chosen (A-T, or an instructor approved custom idea), checked against the sign-up list to confirm it is not already claimed by another group in the section.	6	
2	Proposal Template Completeness & Pitch Clarity	Project_Proposal_Template.docx is fully filled out — all 6 sections (pitch, ER sketch, feature checklist, task split, API, risks) completed, no blanks — and the one-paragraph pitch clearly states what the app does and names a concrete audience/problem, not a vague, generic idea.	6	
3	ER Sketch — Entities & Relationships	ER sketch lists at least 3 entities, each with key attributes, and shows at least one relationship with correct cardinality notation (1:1, 1:M, or M:M).	10	
4	Feature Mapping — Core OOP & Data Foundations	Feature checklist maps at least one planned feature to each of: Object Oriented Design, Data Structure / Recursion, Automated Testing, and Data Modeling + Database.	11	
5	Feature Mapping — Integration & Interaction	Feature checklist maps at least one planned feature to each of: API Consumption, Event-Driven GUI, and Concurrency.	9	

6	Feature Mapping — Analytics (Data	Feature checklist maps at least one planned feature to Data Mining,	4	

	Mining & Visualization)	and at least one planned feature to Data Visualization.		
7	Task Split & Accountability	Task split assigns each member a distinct, genuine primary responsibility — not "everyone does everything" with no clear accountability.	5	
8	API Validity & Accessibility	Chosen public API is real, free (or has a free tier), and reachable from Java with no login wall — verified against the API's live documentation URL.	5	
9	Risk Awareness & Individual Accountability	At least one genuine risk or open question is identified, with a plan or question raised for the instructor and a brief instructor response given; and each member can verbally explain, without prompting, their own assigned Milestone 1 responsibility.	4	
10	Design Document Progress	This week's required section(s) of the team's Project Design Document are complete — see Week08_DesignDoc_Checklist.docx for the detailed breakdown	25	
11	Member Contribution (Peer Graded)	Score derived from this member's peer-evaluation ratings from teammates (see the Peer Evaluation table below).	15	
	TOTAL		100
